

Product Design Activity

- Read all 11 manufacturing process factsheets.
- Choose one process.
- Look at the objects in MoDiP's collection made using that process.
- Design an object that could be made using that process.

You can draw the object but also annotate it:

- write down what it does
- how it is made
- why it is made that way
- If you are in a group, you could then present your product, Dragon's Den style to the panel – your peers.
- When everyone has presented you, as a group, will vote for the winning product.
